LIVING ARCHITECTURE.
DEVELOPING THE TECHNOLOGY TO MAKE IT REPEATABLE.

Buildings that grow.

bowerbuild.org/designx ↗

Architectural concept / November 2026

We mine, pour, and cut; we assemble inert objects that begin decaying the moment they're complete—and we've quietly accepted that

the largest thing our species makes, the built world, is also the most severed from the living one.

ARCHITECTURE, OVER TIME.

Time is a building material.

TO ADD

Clay’s plant-growth simulation.

01 **Structure**

A room from the beginning.

02 **Establishment**

The plants find their place.

03 **Maturity**

The garden transforms the room.

Illustrative growth states

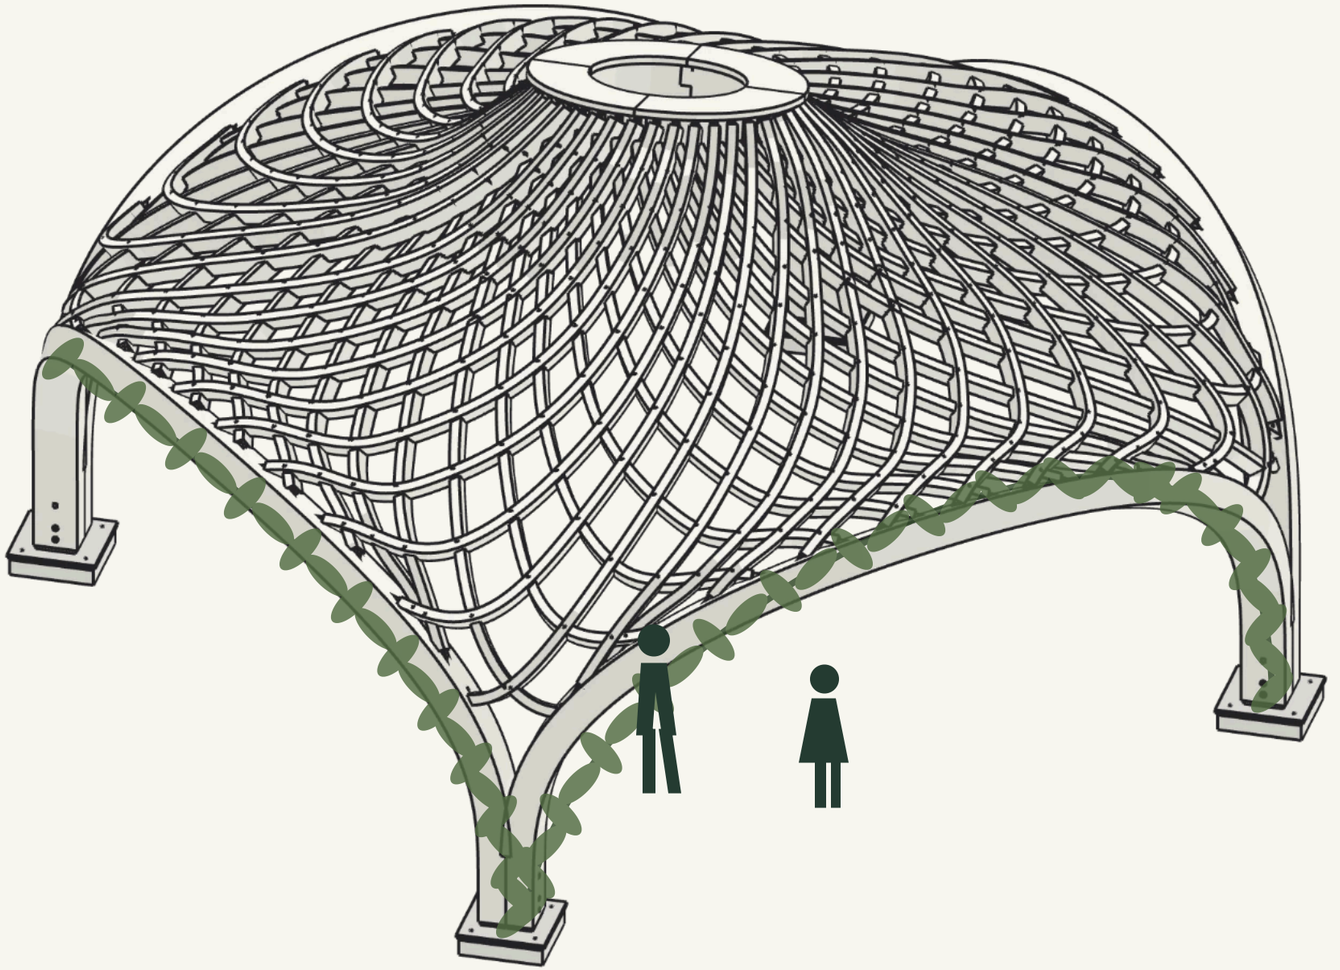

THE STRUCTURAL SYSTEM

A structure. Ready for life.

VISUAL TO COME

Bower assembly

Timber members assemble into the Bower. Plants then colonise the frame.

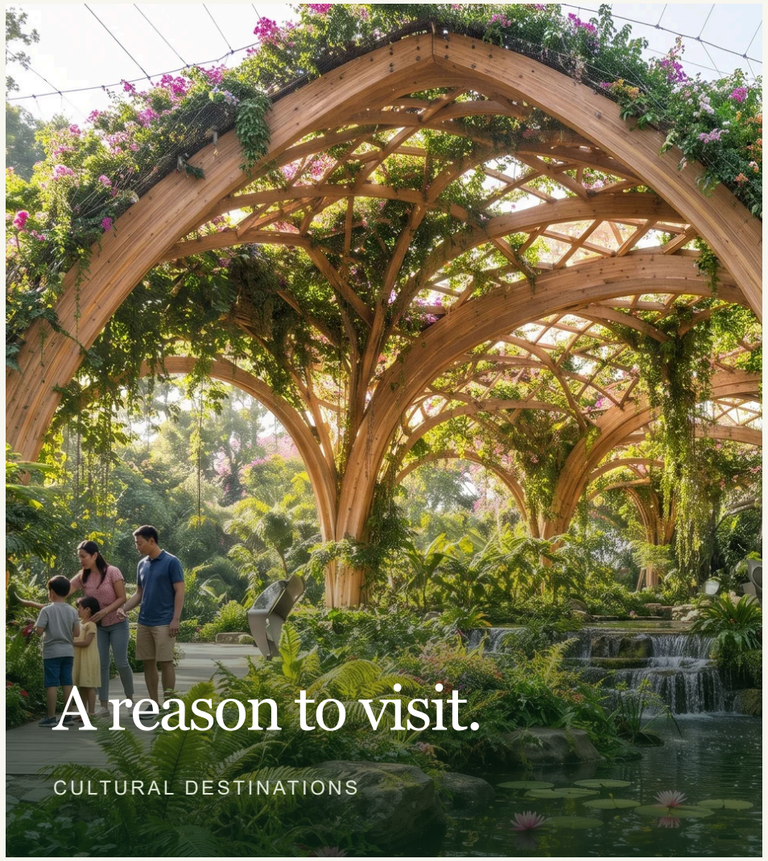

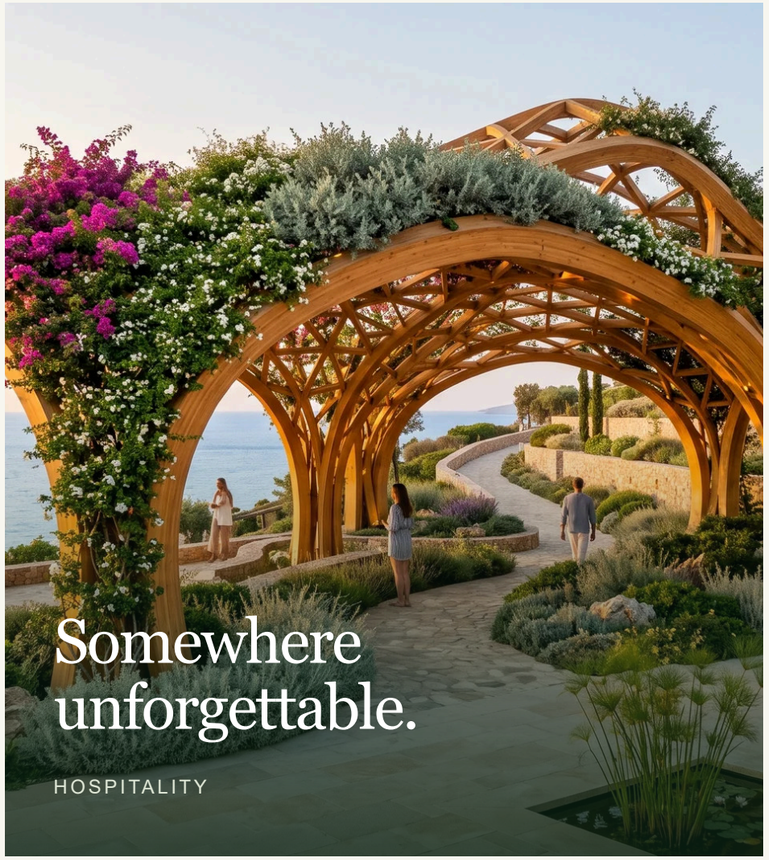

Digital assembly study. Timber structure; illustrative planted layer.

THE FIRST CUSTOMERS

The first market for living architecture.

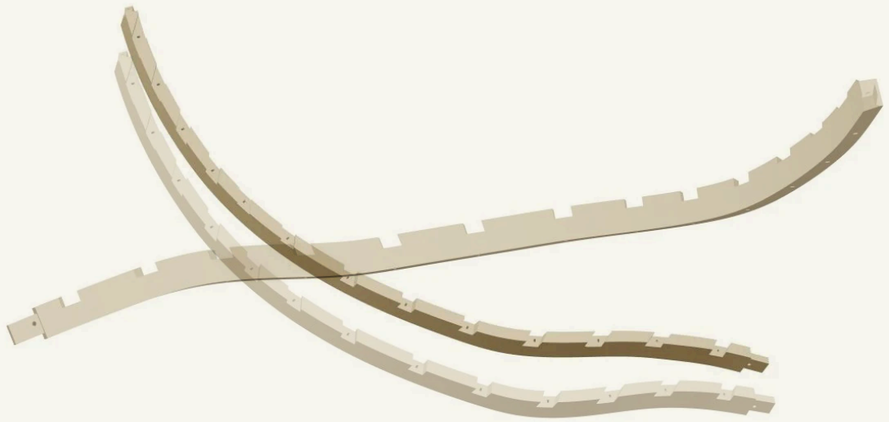

Generated Bower concepts / prospective settings, not commissioned projects.

GEOMETRIC VARIATION

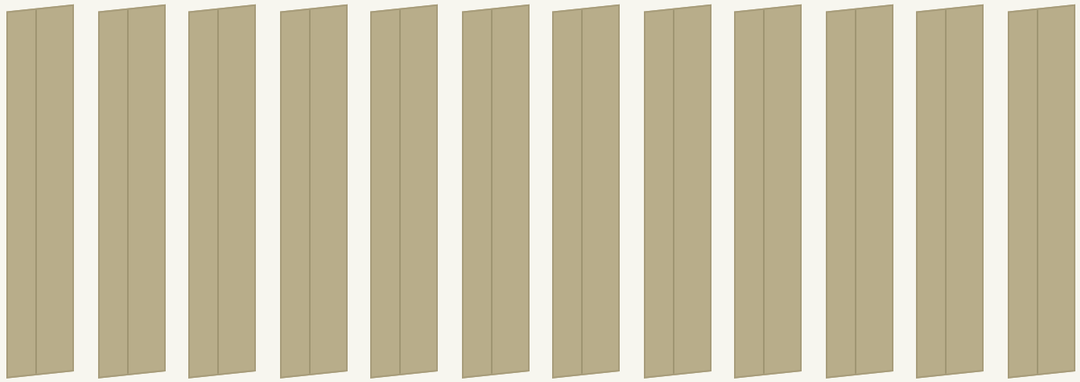

Every piece is different.

CW-001 CW-020 CW-040

INDUSTRIAL LOGIC

Every process must be repeatable.

REPEATABLE STOCK / SCHEMATIC

Variability is the essence of nature and the enemy of industry. Bower's bet is to make variability manufacturable.

Left: distinct parts from the digital Bower One R13 model. The challenge is economical, reliable variation—not the impossibility of bespoke making.

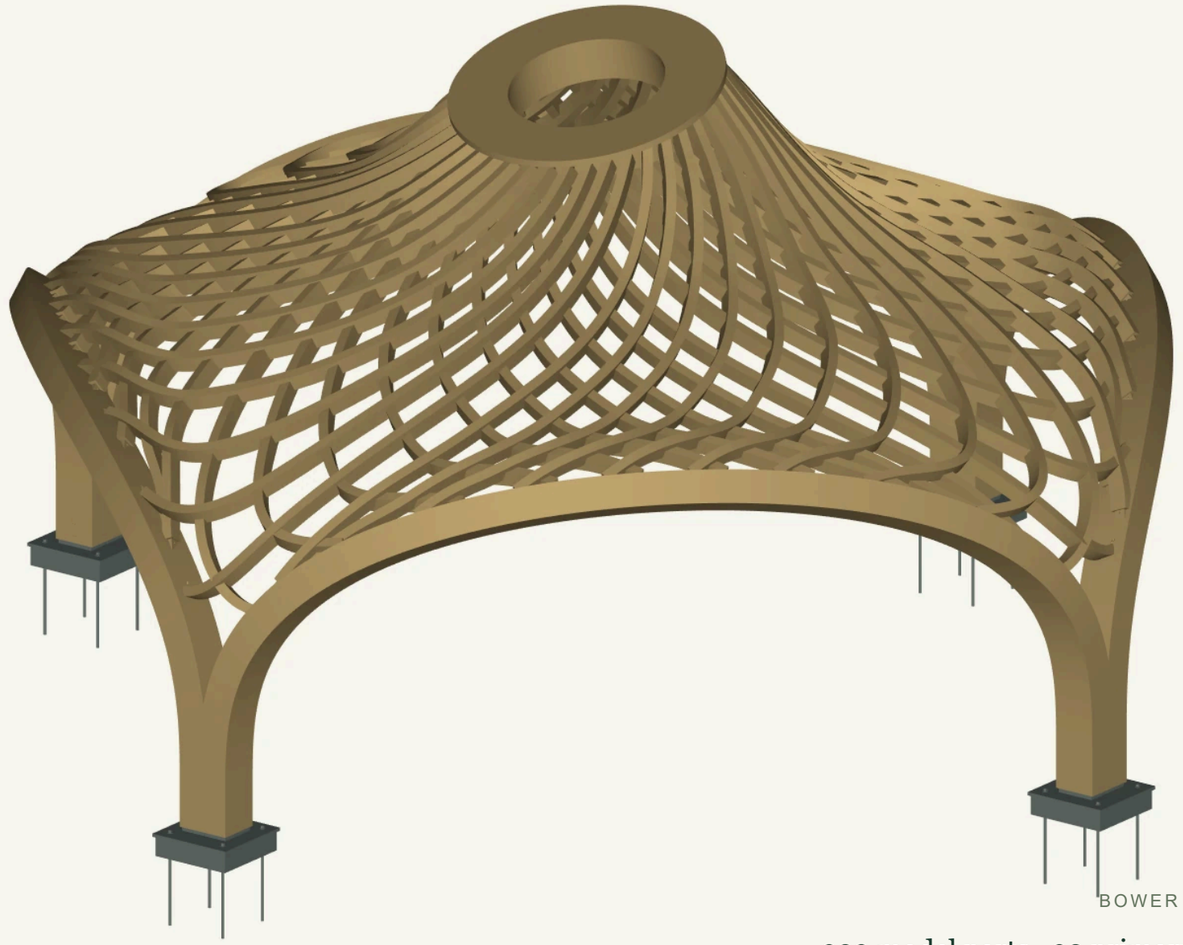

OUR DESIGN-TO-MANUFACTURE ENGINE / IN DEVELOPMENT

Design the form. Resolve every part.

VISUAL TO COME

The engine diagram

Daniel’s geometry, checks and fabrication workflow. Show how they connect.

BOWER ONE / R13

939 model parts · 92 primary timbers

Existing digital model. Current engine diagram to follow.

FACTORY DEVELOPMENT

Design the making.

A production system for parts that are never quite the same.

VISUAL TO COME

Factory floor drawing

Daniel’s live factory plan. Reveal the route from timber to finished component.

Factory design in development. Drawing to follow.

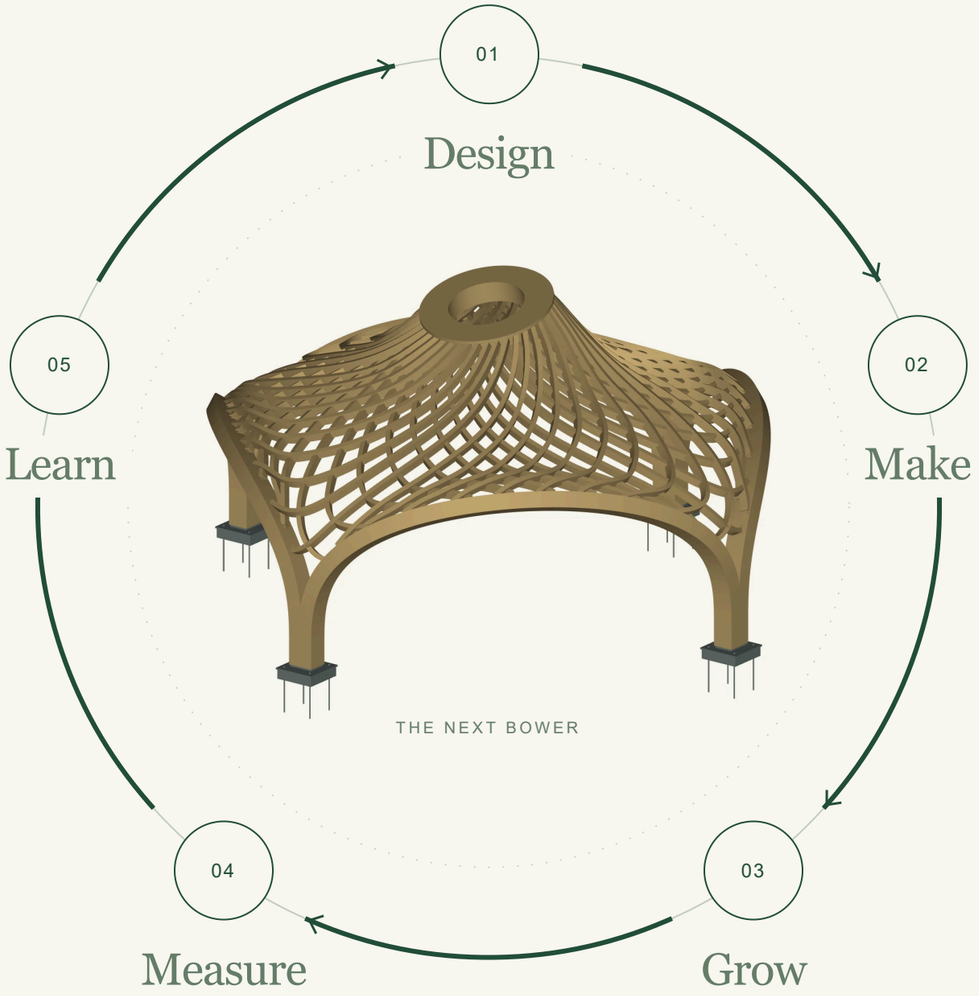

THE TECHNICAL FLYWHEEL

Every Bower teaches the next.

↻ THE NEXT CYCLE

A better starting point. Every time.

What the last Bower teaches the next.

Design → Make → Grow → Measure → Learn → better design.

Intended learning system. Factory and garden measurement are not yet deployed.

CUSTOMER DISCOVERY

The first conversations.

IN DISCUSSION WITH

Eden Project

The Newt

25hours

Active discussions, not signed commissions. / Bower concept pictured.

THE COMMERCIAL OFFER

Commission a Bower.

01 / FIND THE PLACE

Siting study

£65k

indicative

→

02 / DEVELOP THE DESIGN

Design development

£100–250k

proposal-specific

→

03 / MAKE THE PLACE

Commissioned Bower

Build terms by contract.

Indicative proposal fees. Scope agreed per commission.

THE COMMERCIAL FLYWHEEL

Build one. Inspire many.

↻ THE NEXT CYCLE

The next place starts with more behind it.

Experience, references and stronger capability.

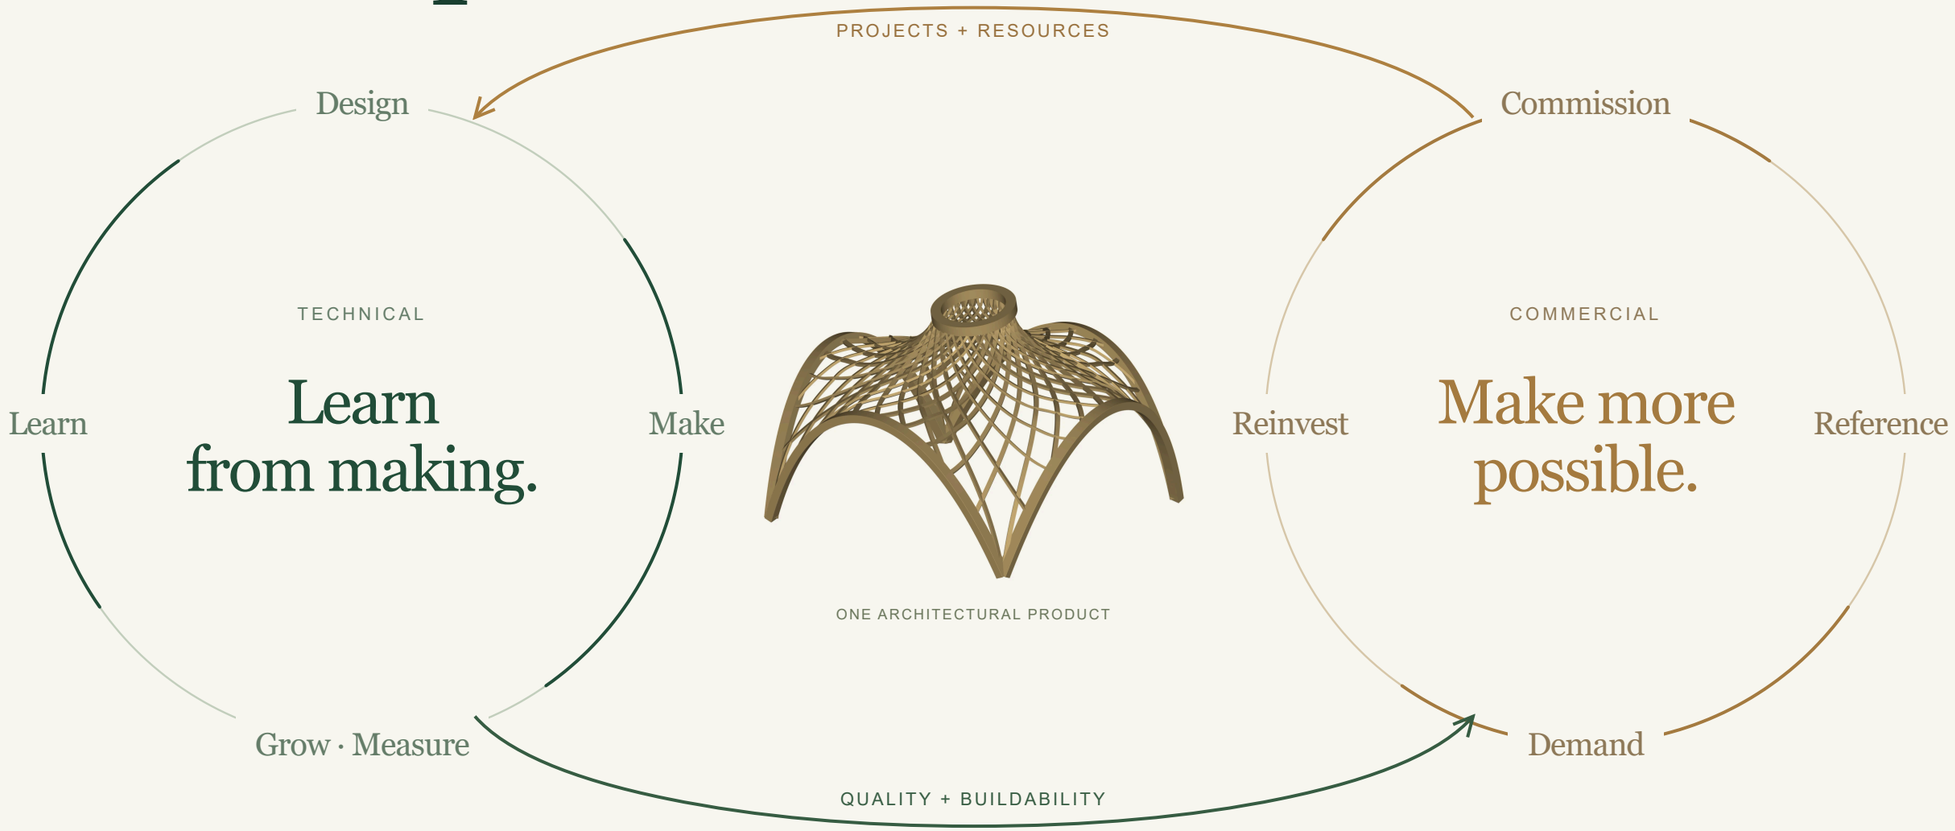

Commission → Bower → Reference → Demand → Reinvestment.

Intended commercial model. Reinvestment depends on project economics and finance.

THE TWO SYSTEMS, TOGETHER

Make it compound.

Projects support learning. Learning improves projects.

Intended operating model. The Bower connects the research and the business.

THE FOUNDERS

Designed together.

DESIGN + RESEARCH

Clay Seifert

Architecture.
Computation.
Living systems.

UT Austin / B.Arch

ENGINE + SYSTEMS

Daniel Guerra

Software.
Fabrication.
Project delivery.

Forsite Studio / project experience

FUTURE ARCHITECTURAL POSSIBILITIES

A room is the beginning.

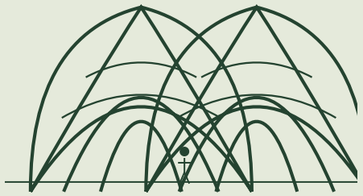

From a garden room to a living urban fabric.

01

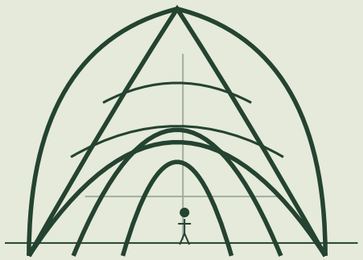

Garden room

02

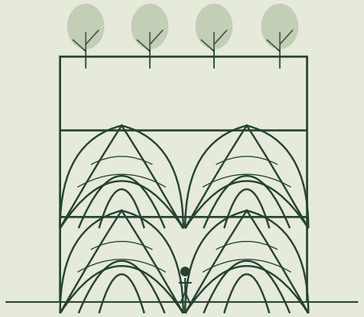

Cultural pavilion

03

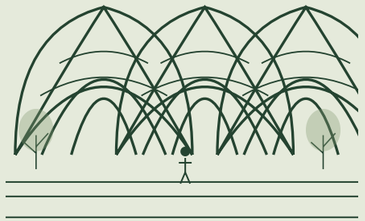

Sanctuary

04

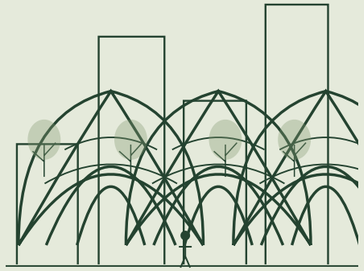

Living building

05

Planted street

06

Urban fabric

FIRST PRODUCT

LONG-TERM RESEARCH HORIZON ↗

Speculative scale studies, not engineered designs, committed projects or a delivery roadmap.
